PROFESSIONAL SUMMARY

Dedicated security practitioner with a strong foundation in penetration testing, VAPT, and web/network security. Adept at utilizing standard industry tools and methodologies for reconnaissance and vulnerability assessment. Passionate about ethical hacking, bringing a proven lab-tested skill set and a proactive security mindset to organizational defense.

TECHNICAL SKILLS

Penetration Testing

Identifying and exploiting vulnerabilities in network and web applications, including privilege escalation.

Networking & Protocols

Understanding network communication and common protocols, with practice in reconnaissance and service enumeration.

Operating Systems & Environments

Working with Kali Linux and Windows 11 for security testing, enumeration, and system analysis.

Security Concepts

Understanding OWASP Top 10, exploitation techniques, vulnerability assessment, and security reporting.

TOOLS

- **Nmap** — recon/scanning
- **Gobuster** — directory enumeration
- **Nikto** — web-server scanning
- **Metasploit** — exploitation
- **Hydra** — credential attacks
- **Wireshark** — network analysis
- **John the Ripper** — password cracking
- **Hashcat** — hash cracking

CERTIFICATIONS

In-Depth Advanced Networking

Issue date: 28 Aug 2025 (CRAW security)

Python

Issue date: 8 Oct 2025 (CRAW Security)

Penetration Testing & Security Analyst

AWS Security

Issue date: 17 mar 2026 (CRAW Security)

Top 20 Critical Web Application Vulnerability

Issue date: 12 May 2026 (CRAW security)

Linux Essentials

Issue date: 14 Sept 2025 (CRAW security)

Ethical Hacking

Issue date: 7 Nov 2025 (CRAW security)

AWS Associate

Issue date: 9 feb 2026 (CRAW Security)

Cyber Forensics & Investigation

Issue date: 4 apr 2026 (CRAW Security)

Mobile Application Security

Issue Date: 17 Jul 2026 (CRAW Security)

PROJECTS

ReconForge

Cybersecurity Enumeration Playbook

05/2026 – 06/2026

- Developed a cybersecurity-focused enumeration playbook to support penetration testers during reconnaissance and enumeration phases.
- Covers 100+ commonly used ports and services with structured attack paths, enumeration methodology, and recommended tools.
- Includes service-specific commands and techniques for Nmap, SMB, FTP, SSH, HTTP, DNS, SMTP, SNMP, LDAP, RDP, databases, containers, and more.
- Provides methodology-based guidance for vulnerability assessment and penetration testing.
- Published as a responsive web application using GitHub Pages.

ReportForge
Penetration Testing Report Generation & Documentation Tool

- Developed a cybersecurity-focused vulnerability reporting tool to streamline the creation of structured penetration testing reports.
- Provides organized sections for vulnerability details, severity, impact, evidence, affected assets, and remediation recommendations.
- Designed to help penetration testers document findings consistently and present technical vulnerabilities in a clear, professional format.
- Published as a responsive web application using GitHub Pages.
